**"From flower to fork" –
Digitale Zwillinge zur
Optimierung von
Lebensmittelproduktionsproz
essen und Lieferketten**

24/04/2024 – Thijs Defraeye

What do we do?

Raw & minimally processed fresh produce

Choose **MyPlate**.gov

What do we do?

Why we work?

Reduce
post-
harvest
losses
farm2fork

ID when &
why food is
lost

What is going wrong?

Delivery air temperature

Accelerated quality loss

Pest infestation

< -0.6 °C

Chilling injury

Understand this for each supply chain & country

Biological risk due to condensation

90 - 95%

Moisture loss

Delivery air relative humidity

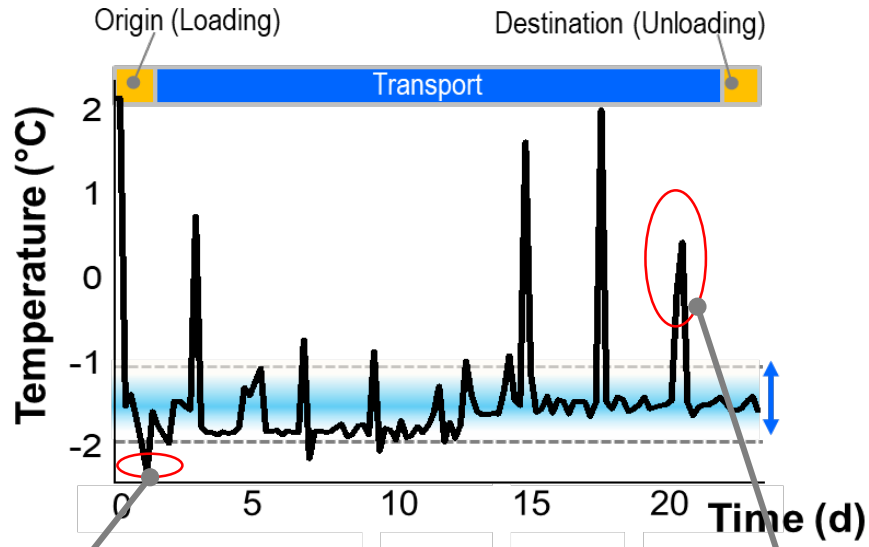

Trade-offs

Where do we start from?

Is our data actionable?

We upcycle data to actionable metrics

Let's upcycle these data by physics-based simulations

Sensing
drivers

Towards digital twins

Unexpected
Unpredictable
Unique

LIFECYCLE

DIGITAL TWIN

Predict

Diagnose

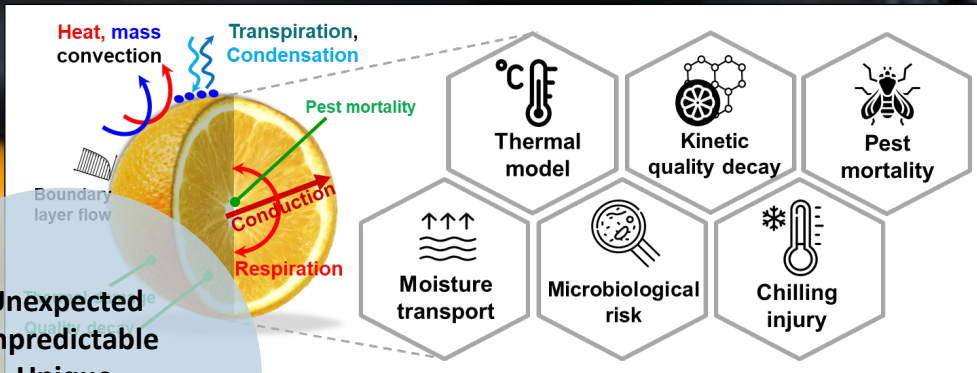

Prevent

Sensing
drivers

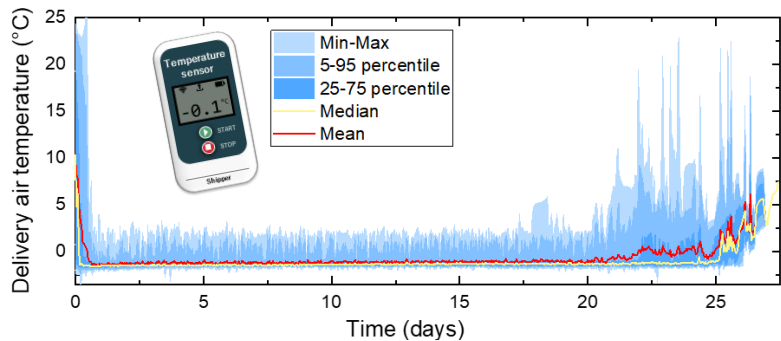

Complementary
data

Actionable
metrics

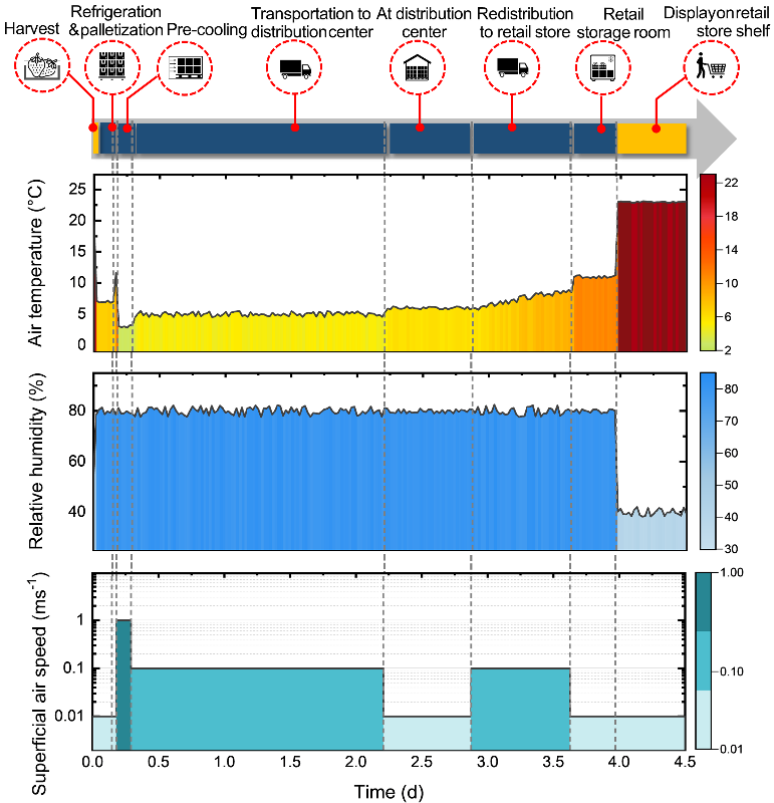

From data to more data to less data

Decision making

How can digital twins help?

Step away from trial & error design

Best ventilated packaging from farm to retail

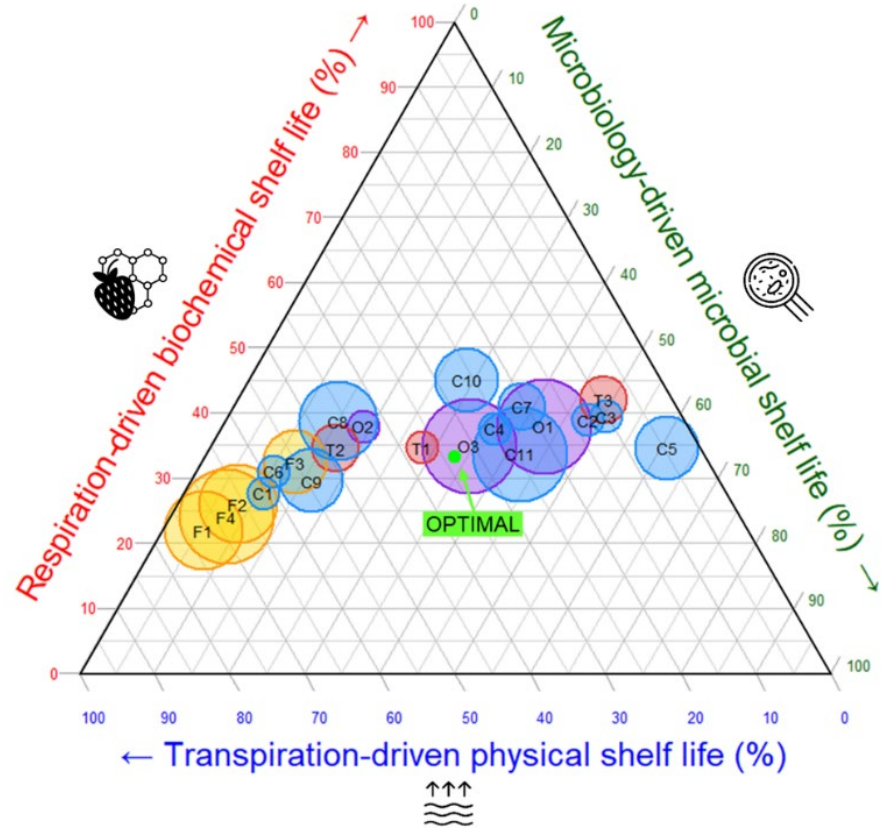

How can digital twins help?

- Open tray package
- Top-sealed package
- Flow-wrapped package
- Clamshell package

Trade-offs between packaging designs

Temperature in air & temperature in fruit [°C]

Remaining shelf life after a transport time of 24 days [days]

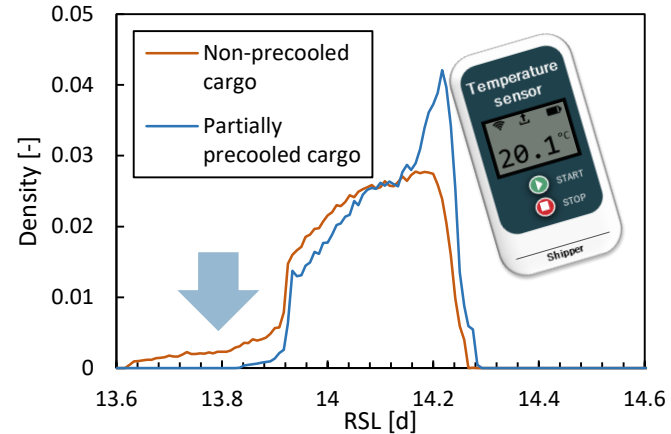

Temperature in air & temperature in fruit [°C] over 3 days

Place 60'000 virtual sensors

Remaining shelf life after 5 days (RSL)

Integrate in existing supply chains

Optimizing food drying processes

ionic wind
TECHNOLOGIES

NASA-inspired innovation
now for FoodTech, MedTech and ventilation

USPs

- ❖ precise airflow
- ❖ noiseless
- ❖ versatile
- ❖ low-energy
- ❖ solid-state
- ❖ disinfection

donato.rubinetti@ionicwind.ch

Emitter

Ionized air

Airflow

Neutral air particle

collision

Ionic wind

Food to be dried

Collector

Power supply

- Non-thermal → heat sensitive materials
- Faster drying with better quality
- Decentralized airflow production
- Energy consumption

Deploying these digital twins to our stakeholders?

Physics-based digital twins
